## Go Paperless with CEL&P

Save time, money, and paper by signing up for paperless billing with Crawfordsville Electric Light & Power. It's easy, secure, and convenient. Sign up today at [www.celp.com](http://www.celp.com).

## Why do we trim trees?

Trees add beauty to our landscape, provide oxygen, and can help conserve energy. When they grow too close to power lines, however, they can cause service disruptions or even outages. That is why branches and limbs that grow into or near lines need to be trimmed and sometimes even removed.

If you notice your trees start to crowd power lines, do not trim them yourself. Contact CEL&P to determine the next recommended step.

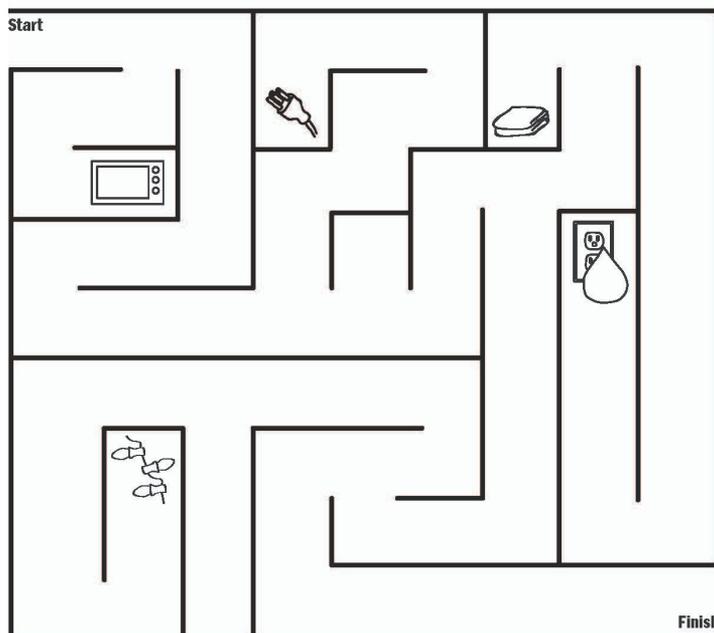

Only professionals certified for line clearance should prune and trim trees near power lines.

Learn more at [www.celp.com](http://www.celp.com) and [www.safeelectricity.org](http://www.safeelectricity.org).

## Kids Voltage Activities

### Sparky needs your help to stay safe!

Sparky is sniffing around the house to see what's new and interesting before he takes a nap. Lead him safely to his favorite resting spot by keeping him away from electrical hazards.

Do not let pets find a cozy warm spot near electronics to stay warm. This is not safe!

If your pet shows an interest in electronic cords, tell your parents so that they can move the cords where they cannot be reached.

Water and electricity are a dangerous mix! Check to make sure appliances and electronics near sinks, bathtubs, and pools are safely away where playful pets can't knock them in.

Never let a pet sleep on top of an electric blanket.

Pay extra attention to pet safety during the holidays. Your pets may confuse lights and decorations for new toys!

**Help protect pets from electrical hazards.**
