

# Solar with Crawfordsville Electric Light & Power

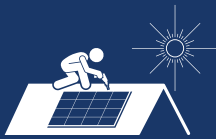

## Our Guidelines

Solar with CEL&P is simple. Customers need to sign an application and interconnect agreement with CEL&P. They will then need to sign a purchased power agreement with the Indiana Municipal Power Agency, who will pay them directly for their over-generation.

Solar arrays should adhere to the most current IEEE Standard for Interconnecting Distributed Resources with Electric Power Systems. Design will require approval from the CEL&P Engineering Director.

Your licensed electrician will need to be licensed by the CEL&P Electrical Inspector. All installations will be inspected by the CEL&P Engineering Director and Electrical Inspector.

Crawfordsville Electric Light & Power will provide, at its own expense, any meter used to measure output of energy from your home.

Guidelines are subject to change.
